Note:- Use JDK 1.6 for Corba because idlj module is present in library of JDK 1.6 & Edit the Setting of IDE, JRE & JDK in 1.6 before creating the projects.

⬇ Create a new project called Corba Server, Create a new filecalled filename.idl

Run in Command Prompt

{
cd C:\Users\workspace\Corba Server\src

idlj   -fall   filename.idl
}

(It created a number of Java files inside the module.)

Refresh the Project Create a new

object class Create a new Server class

In new cmd Prompt- start **orbd -ORBInitialPort 1050** <u>Edit a</u>

<u>server config</u>

{
Set main class server

Program arguments   **-ORBInitialPort 1050 -ORBInitialHost localhost**
}

Run the Server

⬇ Create a new project called Corba Client

Copy the idl modules from Corba server Project & paste in Corba client Create a new Client class

<u>Edit a Client config</u>

{
Set main class Client

Program arguments   **-ORBInitialPort 1050 -ORBInitialHost localhost**
}

Run the Client
